

Tent Pitching Instructions Omega 250 & 350

Flysheet First Pitching

1. Assemble the three poles and lay them parallel on the ground. One pole will be longer than the other two.
2. Open flysheet on ground and position tent in desired direction.
3. Locate pole sleeves on the flysheet and insert poles, one at a time.
4. Locate one end of each pole into corresponding pin system on flysheet. (see diagram below)
5. Push poles into an arch from opposite side and locate pole ends into corresponding pin system on flysheet.
6. Tighten the tension straps at the base of each pole.
7. Clip all flysheet pole clips to tent poles.
8. Peg out elasticated pegging points at both corners of one end of tent using pin-pegs supplied.
9. Pull flysheet taut, away from pegged points, until tent takes shape. Peg the two elasticated pegging points on the opposite end of the tent.
10. Peg down poles through metal rings and remaining flysheet pegging points.
11. Peg out ALL guy lines.

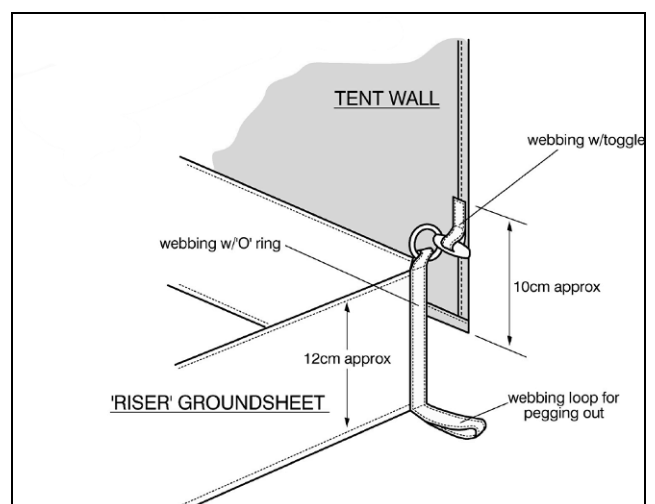

Inner

1. Open out inner and position doorway to correspond with the porch.
2. Starting from the rear of the tent, attach the clips at the base of the inner to the flysheet. Hang the inner by passing the toggles through the plastic rings on the ceiling.
3. Fit porch riser groundsheet and secure the rings to the toggles at the base of the flysheet, and peg down through webbing loops. (See diagram below).

Tension Band System

1. Remove Tension Band System from pockets and clip into the corresponding sockets at the apex of each pole. Adjust the straps until they are taut.
2. **DO NOT OVERTENSION.** Excess tension will alter the shape of the tent and may permanently distort the poles.

IF YOU HAVE ANY PROBLEMS PLEASE CONTACT YOUR LOCAL RETAILER or
 AMG Group Ltd., Kelburn Business Park, Port Glasgow, Scotland. PA14 6TD.
